Guest/Patient Paging Communication

Streamline the guest experience.

When guests are free to roam, they can enjoy a beverage at the bar or browse your gift shop. Treat your patrons to a drink and a distraction and they'll forget they were even waiting when you alert them that their table is ready."

Maintain guest loyalty and increase sales. Whether you're in the restaurant, retail or hospitality industry, you understand the importance of guest satisfaction.

Make the dining-out or shopping experience more pleasant and efficient. With GuestCall® guest pagers, your guest feels more connected while they visit the bar or shop while they wait.

Our guest pagers are designed to streamline your guest's experience. Choose between 3 guest pager models to fit your needs. Scale your guest paging system as your business grows.

Staff / Server Paging Communication

Front-of-House and Back-of-House Unite

When your team is linked, your business thrives. With a server paging system for your restaurant, the front-of-house and back-of-house are harmoniously connected. Quickly alert waitstaff, hostesses, managers, kitchen staff, cooks and more.

Whether you need to quickly address maintenance, food or guest status, staff paging systems streamline the workflow in your bar or restaurant.

Save on labor and maximize staff and server productivity. With a staff paging system, you can do more with less and everyone's job becomes easier, more efficient and less stressful.

Bring your team together.

Connect your team with quick, efficient communication

Unite your team for optimum guest satisfaction and productivity. Use staff and server pagers to run your business efficiently and make your services shine.

CALL BUTTON TRANSMITTERS

Send instant messages to staff or team members

Instantly contact staff with our long range, reliable wireless call buttons. Our push button transmitters are ideal for quick, high volume, one-way communication.

We understand how critical your communication needs are. That's why we take our push button transmitters seriously. Offering the best range and coverage in the industry, we use 12 FCC Shared License Frequencies for "Hassle Free" legal operation with no interference.

Our push button paging systems are great for medical offices, individual and multi-provider practices including restaurants, clinics, dental care, eye care, retail, grocery stores, manufacturing facilities, church and school classrooms, stadiums, arenas and more.

VIRTUAL SERVICE KIOSK (VSK)

By using QR Code signage and your customer's smart phone, you can create an amazing customer experience anywhere in your business. Places that historically were impractical for physical push buttons can now put a personal kiosk for service requests at guest's fingertips.

QR Code Overload? Consolidate multiple QR Codes into one QR Control Center. Buttons can be programmed to open URLs or page specific team members.

SmartCall Waitlist Management Paging and Text

Ideal for healthcare, doctors' offices, retail, trucking and any other business that needs to manage waiting customers and vendors. Track wait times, manage customer or patient flow and instantly send notifications when it is their turn via text or pager.

→ Connect with patients, customers and employees via text and pager
→ Coordinate curbside clients and delivery staff
→ Send and receive messages via SMS text
→ Message and send alerts via alphanumeric pagers
→ View reporting for operations, productivity and wait time management
→ Secure communications with HIPAA compliant messaging

Use SmartCall Messenger as a stand-alone text waitlist application or integrate with one of our paging systems. SmartCall Messenger offers the flexibility to stay connected to clients that do not have cell phones or when you don't want staff using their phones. IPAA Compliant

Know your communications are secure and private. The SmartCall Messenger web server is a local, HTTPS environment for optimal privacy and security. Also, SmartCall Messenger follows HIPAA, the Health Insurance Portability and Accountability Act, standards for protecting sensitive patient data.
